Investment Objective	The primary objective of the Scheme is to generate income through investments in a range of Debt and Money Market Instruments of various maturities with a view to maximising income while maintaining an optimum balance between yield, safety and liquidity. However, there can be no assurance that the investment objectives of the Scheme will be realized. The Scheme do not guarantee/indicate any returns.

Investment Strategies	The net assets of the scheme will be invested in debt and money market instruments. The debt portion of the portfolio will be actively managed based on the AMC's view on interest rates. The price of fixed income instruments varies with changes in interest rates. As interest rates decline, the value of fixed income securities rise and as interest rates rise, their value declines. The AMC forms views on the likely direction of interest rates and the portfolio is structured consistent with these views. Individual instruments are bought and sold based on the conformity with the interest rate view and the instrument specific factors (credit risk, exposure, etc.). By actively managing the portfolio, the scheme attempts to achieve its objective through both interest yield and capital appreciation. As such, the scheme may not invest solely based on the best available yields in the market at all points of time. The scheme aims to provide investors with an actively managed portfolio of debt & money market instruments. BNP PARIBAS MONEY PLUS FUND (BNPPMPF)

Date of Inception	October 21, 2005			
Type of the Scheme	An open-ended Income scheme			
Investment Objective	The primary objective of the Scheme is to provide income consistent with the prudent risk from a portfolio comprising of floating rate debt instruments, fixed rate debt instruments, money market instruments and derivatives. However, there can be no assurance that the investment objective of the Scheme will be achieved. The Scheme do not guarantee / indicate any returns.			
Asset Allocation Pattern	Type of Securities	Normal Allocation (% of Net Assets)	Minimum Allocation (% of Net Assets)	Maximum Allocation (% of Net Assets)
	Floating Rate Debt Instruments (including Money Market Instruments, Debt Instruments of residual maturity less than one year as also Fixed Rate Debt Instruments* swapped for floating rate returns)#	75	65	100
	Fixed Rate Debt Instruments* (including Money Market Instruments & Floating Rate Debt Instruments swapped for fixed rate returns)#	25	0	35
* Debt instruments may include securitised debt upto 60% of the net assets. # Exposure in interest rate derivative upto 50% of the net assets.				
Investment Strategies	The net assets of the scheme will be predominantly invested in floating rate debt instruments, fixed rate debt instruments swapped for floating rate return, fixed rate debt securities, money market instruments and government securities in accordance with the investment pattern table. The objective is to generate stable returns linked to the prevalent rates of interest in the market. The yield on floating rate instruments increase with market interest rates in contrast to fixed interest securities that pay a fixed coupon irrespective of current interest rates. Thus floating rate instruments generate returns linked to market rates of interest. In the absence of floating rate debt instruments, synthetic floating rate instruments can be created with a combination of fixed rate instruments and derivatives such as Interest Rate Swaps and Forward Rate Agreements. Floating rate instruments are typically linked to a benchmark such as MIBOR (overnight to three months), Government Bond Yield (one year and above), etc. The scheme may invest in floating rate instruments with longer duration benchmarks (e.g. 5-year government security yield) as well as short duration benchmarks (e.g. MIBOR). The mix of floating and fixed rate instruments is decided based on the view on interest rates. If the fund manager believes that interest rates are headed higher, the proportion of floating rate instruments is increased. Conversely if the fund manager believes that interest rates are likely to decline, the proportion of fixed rate instruments is increased. The fund manager may use derivatives to create synthetic fixed rate instruments. Individual instruments are selected based on yield, credit risk of issuer, exposure to issuer, etc.			
Risk Profile of the Scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Please read Scheme Information Document carefully for details on Risk Factors before investment. Scheme specific risk factors and risk mitigants are summarised on page 7.			
Plans and Options	The Scheme offers two Plans (i.e. Regular and Institutional). Both the Plans will be managed with a common portfolio. EQUITY & DEBT SCHEMES - RISK FACTORS

STANDARD RISK FACTORS:

- Investments in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk, including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Schemes invest fluctuate, the NAV of the Scheme(s) may go up or down. The various factors which impact the value of the Scheme's investments include, but are not limited to, fluctuations in the bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme(s).
- All mutual funds and securities investments are subject to market risk and there can be no assurance that scheme's objectives will be achieved.
- BNP Paribas Equity Fund, BNP Paribas Dividend Yield Fund, BNP Paribas Tax Advantage Plan (ELSS), BNP Paribas Mid Cap Fund, BNP Paribas Monthly Income Plan, BNP Paribas Flexi Debt Fund, BNP Paribas Money Plus Fund, BNP Paribas Short Term Income Fund, BNP Paribas Bond Fund, BNP Paribas Overnight Fund are the names of the Schemes and do not in any manner indicate either the quality of the Schemes or their future prospects and returns.
- The Sponsor / Associates are not responsible or liable for any loss resulting from the operation of the Schemes beyond the initial contribution of ₹ 1,00,000 (Rupees One Lakh Only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
- The present Schemes are not guaranteed or assured return Schemes.

Risks associated with investing in Derivatives:

The schemes may also use various derivative and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio. As and when the schemes trade in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialised instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Even a small price movement in the underlying instrument could have a large impact on their value.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

SCHEME SPECIFIC RISK FACTORS:

Schemes investing in Equities (including BNPPMIP):

- Subject to the stated investment objectives, the Schemes propose to invest in equity & equity related securities. Equity securities by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors. The volatility of medium / small - capitalization stocks may be higher in comparison to liquid large capitalisation stocks. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Schemes to make the intended purchase of securities due to settlement problems could cause the Schemes to miss certain investment opportunities.
- Investments in equity and equity related securities involve a degree of risks and investors should not invest in the Schemes unless they can afford to take the risk of losing their investment.
- Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted domestic securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risk factors specific to BNP Paribas Dividend Yield Fund

- Though investments would be made in companies with high dividend yield, the performance of the scheme would inter-alia depend on the ability of these companies to sustain dividends in future.
- High dividend yield stocks may be less liquid in terms of trading volumes in the stock markets and hence the impact cost and portfolio liquidity risk is commensurately higher.
- The securities in the Scheme may be predominantly characterized by a stock selection where more emphasis is on stock valuation and less on earnings growth (the 'value' style). There could be time periods when securities of this nature may under perform relative to other stocks in the market. This could impact performance.
- The Scheme retains the flexibility to hold from time to time relatively more concentrated investments in a few sectors as compared to plain diversified equity funds. This may make the Scheme vulnerable to factors that may affect these sectors in specific and may be subject to a greater level of market risk leading to increased volatility in the Scheme's NAV.

Risk factors specific to BNP Paribas Tax Advantage Plan (ELSS)

- Units purchased in the Scheme cannot be assigned / transferred / pledged / redeemed / switched out until the completion of 3 years from the date of allotment of the respective Unit.
- In the event that investible funds of more than 65% of the total proceeds in the Scheme are not invested in equity shares of domestic companies, the tax exemption on income distribution will not be available to the Unit Holders.

Risk factors specific to BNP Paribas Mid Cap Fund

- It is important to note that mid / small cap stocks can be riskier and more volatile on a relative basis; although middle and smaller capitalization stocks provide one an opportunity to go beyond the usual large blue chip stocks and present possible higher capital appreciation. Therefore, the risk levels of investing in small cap and mid cap stocks is more than investing in stocks of large well established companies. Please note that over a time these two categories have demonstrated different levels of volatility and investment returns. And it is important to note that generally, no one class consistently outperforms the others. While smaller and medium size companies may offer substantial opportunities for capital appreciation, they also involve substantial risks. Historically, these companies have been more volatile in price than larger company securities, especially over the short term. Smaller companies are subject to lesser growth prospects & lower degree of liquidity leading to greater price volatility and greater sensitivity of smaller companies to changing economic conditions. Smaller Companies carry large amount of liquidity risk compared to Large Cap companies, as the ability to sell is limited by overall trading volume of the securities, in which it invests. In addition, smaller companies may lack depth of management, may not be able to generate funds necessary for growth or development, or developing or marketing new products or for services for which markets are not yet established. They could also suffer from disadvantages such as - outdated technologies, lack of bargaining power with suppliers, low entry barriers and inadequate management depth. Overall, the risks of investing in medium / small companies are (a) transparency / liquidity levels may not be on par with established, large cap companies; (b) corporate governance may be an issue with some companies; and (c) they may not be resilient enough to withstand shocks of business / economic cycles.

Schemes investing in Bonds (Common for All Debt Scheme):

Credit and Counterparty risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may

default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty on which the fund has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts.

Liquidity Risk: The liquidity of the Fund's investment is inherently restricted by trading volumes in the securities in which the Fund invests. A lower level of liquidity affecting an individual security or derivative or an entire market at the same time, may have an adverse bearing on the value of the Fund's assets.

Interest Rate Risk: The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

Re-investment Risk: The investments made by the scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

Risks associated with investing in securitised debt: Scheme may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS / MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS / MBS or the originator of the underlying receivables. The ABS / MBS holders have a limited recourse to the extent of credit enhancement provided. Securitised debt may suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceeding the credit enhancement provided. As compared to the normal corporate or sovereign debt, securitized debt is normally exposed to a higher level of reinvestment risk.

Risk associated with derivatives: The fund may use various derivative instruments and techniques, permitted within SEBI Regulation from time to time, which may increase the volatility of fund's performance. Usage of derivatives will expose the scheme to certain risks inherent to such derivatives.

Risk Factors Specific to BNP Paribas Income and Gold Fund: The price of gold may fluctuate due to various reasons, for examples, global gold supplies and demand, which is influenced by factors such as forward selling by gold producers, purchases made by gold producers to unwind gold hedging positions, central bank purchases and sales and productions and cost levels in major gold producing countries, investor's expectation with respect to the rate of inflation, currency exchange rates, interest rates, investment and trading activities of commodity funds / hedge funds, global or regional political or economic or financial events and situations, central Bank actions, inflation trends and interest rate changes, geo-political concerns etc. Please refer Scheme Information Document for more details.

RISK MANAGEMENT - EQUITY SCHEME

Standard Risk Management

Type of Risk	Risk Management
Concentration Risk	The fund will try and mitigate this risk (wherever feasible in line with each scheme's objective) by investing in sufficiently large number of companies so as to maintain optimum diversification and keep stock-specific concentration risk relatively low.
Market Risk	Market risk is a risk which is inherent to an equity scheme. The scheme may use derivatives to limit this risk.
Liquidity Risk	The Equity scheme will be a high risk, high return scheme and the time horizon, until the market realizes the true value of the stocks that the fund has invested into, could be longer. As such the liquidity of stocks that the scheme invests into could be relatively low. The scheme will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying stocks.
Derivatives Risk	The fund has provision for using derivative instruments for portfolio balancing and hedging purposes. The scheme will endeavour to maintain adequate controls to monitor the derivatives transactions entered into.

RISK MANAGEMENT - DEBT SCHEME

Standard Risk Management

Type of Risk	Risk Management
Credit Risk	A credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. Investments in bonds and debentures will usually be in instruments that have been assigned investment grade ratings (i.e. BBB / A3 and above) by a recognised credit rating agency. In addition, there is a regulatory and internal exposure limit for each issuer. There can however be no guarantee against a credit default within the scheme.
Interest Rate Risk (including Reinvestment Risk)	The Fund Manager will endeavour to actively manage the scheme duration based on the ensuing market conditions. Based on its interest outlook, the Fund Manager may take tactical and/or strategic interest rate calls to manage the investments of the scheme on a dynamic basis in order to exploit emerging opportunities in the market.
Liquidity Risk	The Fund Manager will undertake daily cash management monitoring, taking into consideration daily cash flows on account of redemptions as well as subscriptions into/from the fund. The fund manager shall follow the asset allocation pattern in SID and residual cash will be invested in the collateralised borrowing & lending obligations (CBLO)/repo market, which shall ensure liquidity in the scheme under normal circumstances. There can however be no guarantee against liquidity issues within the scheme.
Derivatives Risk	The scheme may utilise derivative instruments for hedging & portfolio balancing purposes. All Interest Rate Swaps will be undertaken with approved counter parties under pre approved International Swaps and Derivatives Association (ISDA) agreements. Marking to market of swaps, netting off of cash flow and default provision clauses will be provided as per international best practice on a reciprocal basis. Interest rate swaps and other derivative instruments will be used as per local (RBI and SEBI) regulatory guidelines. The fund will monitor the derivatives transactions entered into.
Counterparty Risk	The Fund Manager reviews all counterparties prior to transacting, using internal guidelines. The Mutual Fund has an internal exposure limit for its counterparties due to which this risk is reduced to the extent of exposure. There can however be no guarantee against a counterparty default within the scheme.

Risk associated with investments in Gold ETFs: Gold ETFs are launched by mutual funds within the framework of SEBI regulations. Currently, SEBI regulation allows Gold ETFs backed by physical gold only. Nonetheless, gold ETF investments may be subject to substantial fluctuations in value.

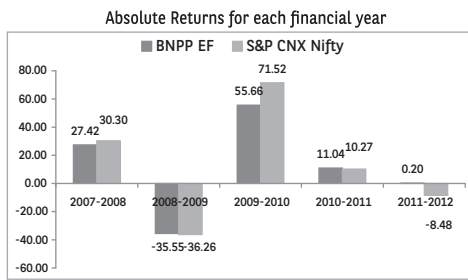

Risk associated with investments in securitised debt: The parameters that will be used while evaluating investment decision relating to a pool securitization transaction are provided in respective Scheme Information Document.
